

SLANGCASTIC Human Annotation

Questionnaire Q1-100

Dear volunteer annotators,

Thank you for participating in the "Slang and Sarcasm: Evaluating LLMs' Sensitivity to Generation Z Sarcastic Slang Relative to Human" research as an human annotator. Before starting the annotation process, please read the following description about this Google Form questionnaire:

1. Purpose of the Study

This study aims to achieve the following specific objectives: (a) investigate the binary sarcasm detection (sarcastic vs. non-sarcastic), (b) compare the alignment of sentiment ratings between current LLMs and Generation Z human annotators, (c) analyze the variations in model and human behavior using statistical measures, and (d) explore the alignment or discrepancy through qualitative justification.

2. Study Procedure

You will be asked to rate a total of 200 tweets from the SLANGCASTIC Dataset. For each tweet, you will be prompted to (a) classify the sarcasm polarity as Sarcastic or Not Sarcastic, and (b) assign a numerical sentiment rating using an 11-point scale from -5 (extreme discontent) to +5 (extreme pleasure). You are also required to provide a brief justification for your rating. Further instructions, rating guidance, and exemplars will be provided once you enroll to participate.

3. Time Required for Participation

The data collection will take place under supervision through a Google Form between 2/21/2026 and 3/8/2026. Participants will be supervised to annotate the datasets.

4. Potential Risks of Study

A potential safety concern is the use of sarcastic slang, which can sometimes be used for the expression of negative emotions. To mitigate this risk, the study balanced the dataset with half sarcastic and half non-sarcastic sentences, and participants are free to discontinue participation at any time without penalty.

5. Benefits of Participation

Your participation will contribute to filling the critical data gap required to test LLMs' capabilities against modern linguistic phenomena, as the study creates the SLANGCASTIC corpus. The research aims to provide critical insights to assist LLM developers in training future chatbots. The findings may also apply to medical settings, potentially improving chatbot companionship and reducing secondary damage.

6. Confidentiality

Your response to this survey will be anonymous. No personal information will be collected (i.e. email) through the completion of this survey. The information you provide is only used for research and will be kept confidential and does not involve any commercial activities.

Your valuable opinions are of great help to this research. I sincerely thank you for your support and contribution to this research and express our highest gratitude for your cooperation. If you have any questions, please contact me.

Researcher: Zi-Xiang Lin
Email: zixiang.ryan.lin@gmail.com

* Indicates required question

1. Participation Consent: Your participation in this study is voluntary. If you decide * to participate, you will be asked to provide informed consent. Even after giving your consent, you can still withdraw from the survey at any time without providing any reason.

Mark only one oval.

- ☐ I have read and understood the information provided. I understand that my participation is voluntary and that I allow researchers to include my responses to the research.

Pre-annotation Training

Your Task

Annotators will complete two separate tasks for each tweet:

1. **Sarcasm Detection (Binary Classification)**
2. **Sentiment Rating (11-Point Scale)**

Annotators must base all judgments on the **intended meaning** of the tweet, not its literal wording.

Detecting Sarcasm

Sarcasm is defined as “the use of positive or negative language to express the opposite sentiment.”

Classification options:

- Sarcastic
- Not Sarcastic

Examples:

“You’re so freakin’ chopped, bruh.”

Although “chopped” literally means being physically cut, the intended meaning is closer to “You’re very unattractive,” which conveys negative sentiment. Therefore, this would receive a negative score.

Evaluating Sentiment (Positive vs. Negative)

Sentiment Scale				
Sentiment will be rated on an 11-point scale from -5 to +5:				
Score	Description			
-5	Extreme negative emotion (disgust, intense anger)			
-3	Moderate negative emotion			
-1	Slight negative emotion			
0	Neutral / balanced / no clear emotion			
1	Slight positive emotion			
3	Moderate positive emotion			
5	Extreme positive emotion (joy, excitement)			

Important Instruction

Assign a score based on the meaning the sender intends the reader to infer, instead of the tweets' surface-level language.

For instance, although "You're so freakin' chopped, bruh." literally means "You have been cut in parts," scoring should consider the implicit meaning of "You're so freakin' ugly," which results in a lower score.

Scoring Example

Text	Score
"Oh, fantastic, I absolutely love being stuck in bumper-to-bumper traffic for two hours."	-5
"I'm genuinely upset that they canceled my favorite show."	-3
"The meeting concluded at three o'clock."	0
"I really enjoyed that new movie; the acting was solid."	3
"I got accepted into my dream school... best day of my life!"	5

Q1

This is the best movie of all time, and that's on periodt.

2. Classify the sarcasm polarity of the tweet as Sarcastic or Not Sarcastic. *

Mark only one oval.

- ☐ Sarcastic
- ☐ Not Sarcastic

3. Assign a numerical value between -5 (conveying disgust or extreme discontent) and 5 (conveying obvious joy and approval or extreme pleasure) to represent the sentiment intensity expressed in the tweet. *
